

Crossing the Infrastructure & HITECH Meaningful Divide

Crossing Traditional Boundaries

March 22-23, 2012
Radisson Valley Forge
King of Prussia, Pennsylvania 19406-1355

HITECH has sought to improve American health care delivery and patient care through an unprecedented investment in health information technology. The provisions of HITECH are designed to work together to provide the necessary assistance and technical support to providers, enable coordination and alignment within and among states, and assure the workforce is properly trained and equipped to be meaningful users of Electronic Health Records. 2011 was a challenging, yet exciting year for healthcare, as many new providers were “breaking barriers” to adopt of new technology.

What does the technology infrastructure look like, a year after Stage I? What will Stage II of Meaningful Use, Accountable Care Organizations, and Health Information Exchanges mean to the healthcare professional and the technologists must support them?

This symposium is a “must attend” opportunity for Health and University Life Sciences Information Technology professionals from diverse sectors, disciplines, and perspectives come together again in an engaging and informative structured symposium that is collaboratively designed around conversation on breaking barriers crossing the healthcare infrastructure technology meaningful divide as we continue to challenge traditional boundaries.
